pKa Values

HI	-10	CH ₃ COOH	4.7	ArOH	10	H ₂	35
HBr	-8	HN ₃	4.7	RSH	10-12	NH ₃	36
HCl	-6	H ₂ S	7.0	H ₂ O	15.7	H ₂ C=CH ₂	45
H ₃ O ⁺	-1.7	NH ₄ ⁺	9.3	ROH (R=alkyl)	16-18	CH ₄	60
HF	3.2	HCN	9.4	HC≡CH	26		

- 1) Heroin (a.k.a. diacetylmorphine), shown below, is an opiate typically used as a recreational drug for its euphoric effects. Which of the listed functional groups does heroin contain? Circle all that apply. (10 pts)

Alcohol	Aldehyde	Alkene	Amide	Amine
Aromatic ring	Carboxylic acid	Ester	Ether	Ketone

- 2) For each structure, draw a valid Lewis structure (including lone pairs and formal charges on each atom) and write **both** the electronic and the molecular geometry around the central atom. (20 pts)

3) Provide names for each of the following structures. (15 pts)

4) For each pair of compounds shown below, select the more acidic of the two compounds and explain your reasoning in under ten words per explanation. (10 pts)

- 5) Give the hybridization for each non-hydrogen atom in this molecule. Note that the geometry around the nitrogen is actually trigonal planar and not tetrahedral as you may expect. What does this imply about the nitrogen atom's hybridization? (10 pts)

- 6) Complete each arrow-pushing mechanism and identify each reactant as a nucleophile, electrophile, acid, or base. (15 pts)

7) For each of the following reactions, does the equilibrium favor the reactants or products? (12 pts)

8) Draw a compound that matches the criteria listed. (8 pts)

a. An alkane with formula C_4H_8 with no primary carbons

b. An alkane with formula C_5H_{10} with exactly one quaternary carbon
